

Navigation panel

Reuse navigation destinations across desktop and mobile chrome.

Problem and boundary

Public contract

Working integration

@epam/ai-dial-navigation-panel

When this library is useful

Reuse navigation destinations across desktop and mobile chrome.

01

Navigate an app

Render a desktop destination rail.

02

Use a phone

Show destinations and settings inside a bottom sheet.

03

Declare settings once

Share menu groups across rail menus and mobile pages.

Follow the ownership boundary

Inputs and effects stay explicit.

Library: Rail, user menu, mobile sheet and its local page stack.

The public contract to start with

NavigationPanel · selected surface; full API index is in the bundle.

Input or operation	Contract
items	NavigationPanelItem[]
labels	NavigationPanelLabels
renderLink (optional)	NavigationLinkRenderer
footer (optional)	ReactNode

A minimal workspace integration

TypeScript / React example · imports and host setup abridged.

```
<NavigationPanel
  items={items}
  labels={{ ariaLabel: 'Demo navigation' }}
  renderLink={(item, children) => (
    <a href={item.id}>{children}</a>
  )}
/>
```

Full example: [examples/navigation-panel.tsx](#) · uses [@epam/ai-dial-navigation-panel](#)

Wire a realistic host workflow

Keep navigation panel focused on its public responsibility.

01

Prepare destinations

The host supplies item ids, labels and active state.

02

Render host links

Use `renderLink` to bind each item to the chosen router.

03

Reflect navigation

Update active state when the application route changes.

Available customization

01

Router integration

`renderLink` wraps destination children with the host link element.

02

Mobile stack

Use the bottom sheet and its navigation hook for drill-down pages.

03

Shared menus

`NavigationMenuGroup` describes selectable settings options.

Find the integration and its checks

Existing tests are evidence of intended behavior; suite results are not claimed.

Evidence	Where to look
Real consumer	chat/components/Navigation/Navigation.tsx
Test evidence	renders the nav landmark with the given accessible name
Test evidence	labels the avatar trigger

Constraints that affect integration

01

Responsive selection

The host chooses which surface to render.

02

No login system

UserMenu displays supplied profile data and callbacks.

03

Explicit logos

Resolve logo URLs before passing them into NavigationPanel.
