

Quotations

Connect answer annotations to inspectable evidence.

Problem and boundary

Public contract

Working integration

@epam/ai-dial-quotations

When this library is useful

Connect answer annotations to inspectable evidence.

01

Mark a claim

Show an inline source marker in an answer.

02

Group evidence

Group annotations by source or citation id.

03

Jump to context

Derive PDF or Office highlight locations.

Follow the ownership boundary

Inputs and effects stay explicit.

Library: Annotation utilities, citation presentation and optional citation state.

The public contract to start with

CitationMarker · selected surface; full API index is in the bundle.

Input or operation	Contract
sourceName	string
annotationCount	number
onOpen	() => void
labels	CitationMarkerLabels

A minimal workspace integration

TypeScript / React example · imports and host setup abridged.

```
<CitationMarker
  sourceName="demo-report.pdf" annotationCount={2}
  onOpen={() => setOpened(true)}
  labels={{
    ariaLabel: 'Open demo citation',
    label: 'demo-report.pdf',
    labelWithOverflow: 'demo-report.pdf +1',
  }}
/>
```

Full example: [examples/quotations.tsx](#) · uses [@epam/ai-dial-quotations](#)

Wire a realistic host workflow

Keep quotations focused on its public responsibility.

01

Prepare citation data

Resolve the source name, count and display labels.

02

Render a marker

CitationMarker turns that data into a selectable control.

03

Open host evidence

Use onOpen to select a source or display its preview.

Available customization

01

Multiple citation forms

Utilities support offset annotations and paired cit tags.

02

Markdown composition

The citation Markdown hook builds renderer overrides.

03

Viewer locations

Helpers derive PDF and supported Office highlight coordinates.

Find the integration and its checks

Existing tests are evidence of intended behavior; suite results are not claimed.

Evidence	Where to look
Real consumer	chat-hooks/src/conversation-sources/useConversationSources/ useConversationSources.ts
Test evidence	returns content unchanged and renders no marker for uncited content without calling buildLabel
Test evidence	uses the single label when annotationCount is 1

Constraints that affect integration

01

Wire the pipeline

Allowed cit tags and renderer overrides must agree.

02

Streaming fragments

Incomplete citation tags need streaming-aware handling.

03

No source download

Callbacks and resolvers connect the marker to actual evidence.
