

Scheduled tasks

Render task lists, forms and run history from host-owned schedules.

Problem and boundary

Public contract

Working integration

@epam/ai-dial-scheduled-tasks

When this library is useful

Render task lists, forms and run history from host-owned schedules.

01

Browse automation

Search and sort scheduled task cards.

02

Create or edit

Collect schedule form values and validation errors.

03

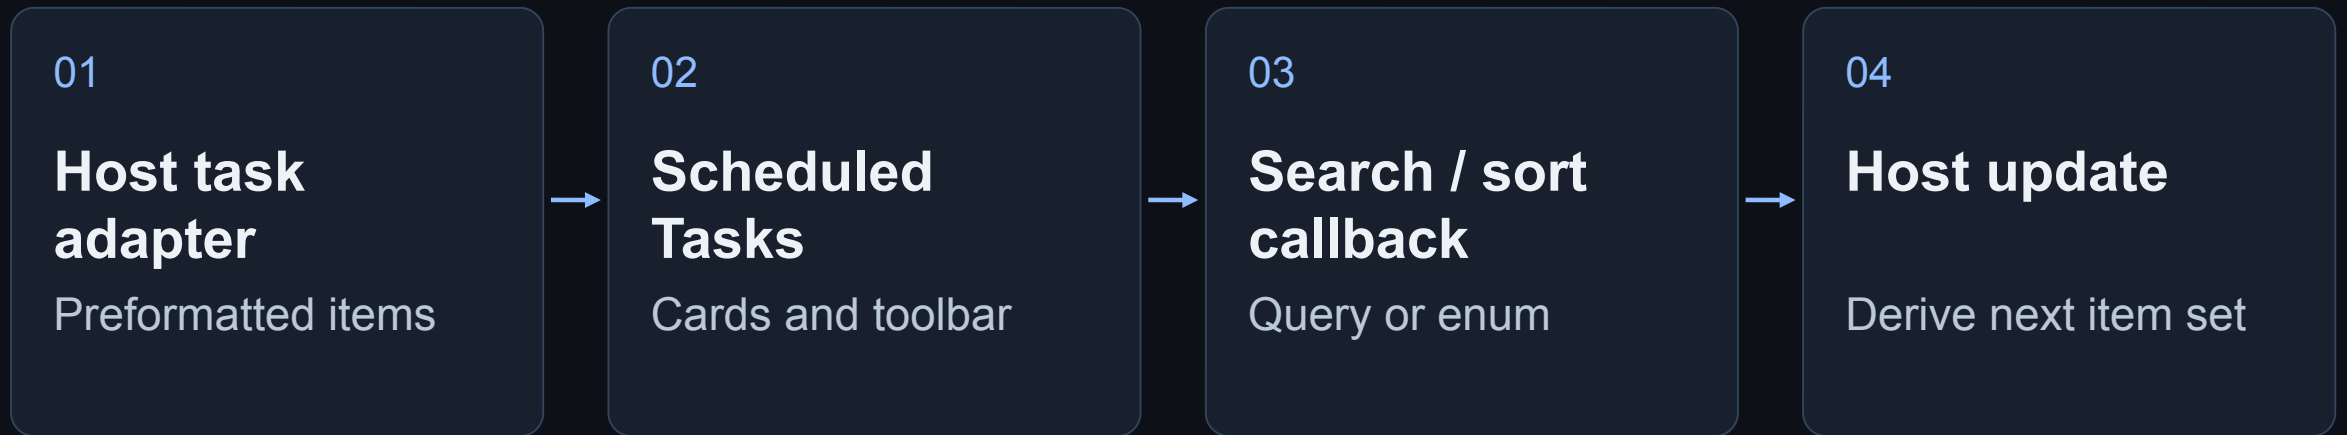

Inspect execution

Display a task summary and past run statuses.

Follow the ownership boundary

Inputs and effects stay explicit.

Library: List/form/detail UI and user interactions.

The public contract to start with

ScheduledTasks · selected surface; full API index is in the bundle.

Input or operation	Contract
items	ScheduledTaskItem[]
searchQuery	string
sortKey	ScheduledTasksSortKey
labels	ScheduledTasksLabels

A minimal workspace integration

TypeScript / React example · imports and host setup abridged.

```
const [query, setQuery] = useState('');
const [sort, setSort] = useState(
  ScheduledTasksSortKey.FirstToRun,
);
<ScheduledTasks
  {...host}
  searchQuery={query} onSearchQueryChange={setQuery}
  sortKey={sort} onSortChange={setSort}
/>
// host supplies items, labels and onCreateClick.
```

Full example: [examples/scheduled-tasks.tsx](#) · uses [@epam/ai-dial-scheduled-tasks](#)

Wire a realistic host workflow

Keep scheduled tasks focused on its public responsibility.

01

Load task records

The host supplies task items, labels and action callbacks.

02

Control the view

Manage the search query and sort key in the host.

03

Handle a task action

Use the host adapter to create or update task data.

Available customization

01

List pagination

hasMore,
isLoadingMore and
onLoadMore support
incremental loading.

02

Form and detail exports

Create forms and task
detail views are distinct
public components.

03

Run status display

The run-history list
renders records
supplied by the host.

Find the integration and its checks

Existing tests are evidence of intended behavior; suite results are not claimed.

Evidence	Where to look
Real consumer	chat/pages/ScheduledTaskDetailPage/ScheduledTaskDetailPage.tsx
Test evidence	highlights the matching substring of the title
Test evidence	renders the resolved model display name

Constraints that affect integration

01

No task scheduler

Rendering a schedule does not execute work in the background.

02

Formatting stays outside

Pass already-formatted labels and timestamps.

03

Filter intentionally

The controlled search/sort contract requires host updates.
