

Skill editor

Edit a skill and its supporting file tree through host callbacks.

Problem and boundary

Public contract

Working integration

@epam/ai-dial-skill-editor

When this library is useful

Edit a skill and its supporting file tree through host callbacks.

01

Author instructions

Edit skill metadata and Markdown instructions.

02

Attach supporting files

Select, expand and manage a file tree.

03

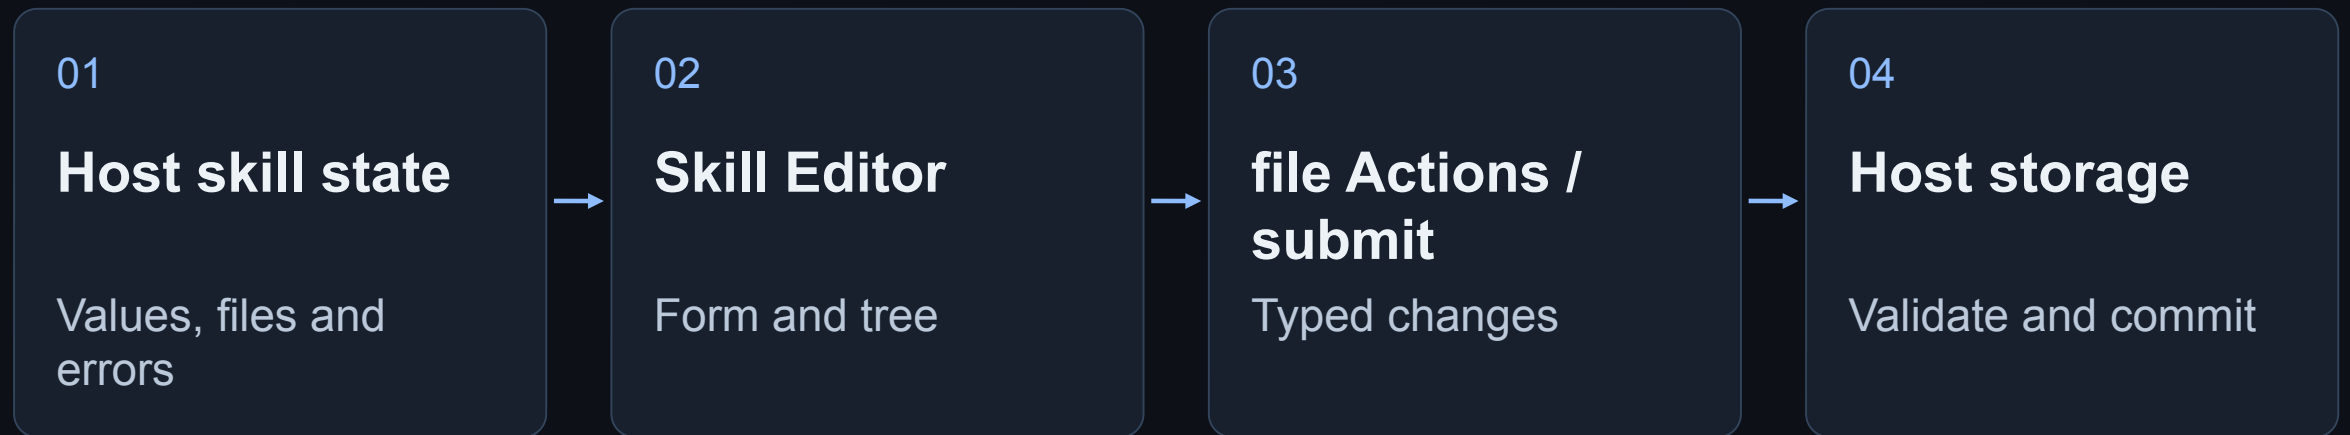

Resolve edits safely

Show validation and conflict state from the host.

Follow the ownership boundary

Inputs and effects stay explicit.

Library: Form editing, file-tree interaction and the protected root SKILL.md node.

The public contract to start with

SkillEditor · selected surface; full API index is in the bundle.

Input or operation	Contract
files	SkillFileTreeNode[]
fileActions	SkillEditorFileActions
onSubmit	(values: SkillEditorValues) => void
conflict (optional)	SkillEditorConflict

A minimal workspace integration

TypeScript / React example · imports and host setup abridged.

```
<SkillEditor
  {...host}
  title="Create demo skill"
  initialValues={{
    name: 'demo-skill', description: 'Demo instructions',
  }}
/>
// host supplies files, fileActions and save/navigation callbacks.
```

Full example: [examples/skill-editor.tsx](#) · uses [@epam/ai-dial-skill-editor](#)

Wire a realistic host workflow

Keep skill editor focused on its public responsibility.

01

Load skill inputs

Prepare metadata, files and the required file actions.

02

Collect edits

The editor returns changes through host callbacks.

03

Save the skill

The host performs persistence and handles navigation.

Available customization

01

File action interface

Validation and upload callbacks keep storage rules outside the view.

02

Conflict UI

conflict and onReloadLatest support a host conflict workflow.

03

Selection control

selectedPath and expandedPaths can be controlled externally.

Find the integration and its checks

Existing tests are evidence of intended behavior; suite results are not claimed.

Evidence	Where to look
Real consumer	chat-hooks/src/skill/skill.ts
Test evidence	activates on drag-enter
Test evidence	renders nothing when not visible

Constraints that affect integration

01

Protected entry file

The root SKILL.md cannot be removed by the tree UI.

02

No archive writer

The host assembles the persisted skill representation.

03

Async ownership

Supply meaningful loading, submitting and error states.
